REFERENCE

Ref: The business activity of the company GEORGH ENGINEERING Ltd - Sofia city

Together with the company GEORGH ENGINEERING Ltd we make an activity in the field of construction and planning. In 2000 the company completed as subcontractor the tunnel part between Inspection pit 9 and Inspection pit 10 from the site Unified Center for the Control of Air Traffic where it applied for the first time in Bulgaria a new method for temporary fortifications when working in complex geologic conditions - injecting polyurethane. The company has at its disposal highly qualified specialists and a modern basis to perform such construction assembly works as a result of which the site has been rendered having very good quality.

I issue the hereby letter of recommendation to the company GEORGH ENGINEERING Ltd - Sofia city, to serve in order to take part in auctions as well as in order to assign similar construction works.
